

## O&M Cost Cap Program

The GCube O&M Cost Cap Program is a comprehensive insurance program designed to cover operational onshore wind farms from O&M cost exposure and serial defect within the project's WTG fleet. The policy is designed to indemnify the insured for unscheduled maintenance cost overruns, which is triggered when expenditures exceed the fixed budget. In conjunction with the GCube All-Risk policy, the Cost Cap Program covers the insured for losses to major components.

### Coverage Details

- Defects of design, plan, specification, materials or workmanship
- Repair, replacement, and inspection of named major components
- Costs for removal and reassembly of major components (i.e. component costs, crane, labor, etc.)

### The Cost Cap Difference

- Reduces reserve requirements to free up cash flow
- Greater budget certainty
- Seamless and combined coverage with GCube's All-Risk policy
- Dynamic underwriting program enables the insured to negotiate pricing, terms, and conditions to create a program specifically catered to their risk appetite
- Complements Master Programs

### Target Clients

- OEM's seeking to expand their presence in operations
- Independent Service Providers
- Owner/Operators who retain their own O&M services
- Asset Owners with wind portfolio
- Utilities
